

RVMS DRIVER MOBILE APP

User Guide & Walkthrough

A plain-language tour of the Android app for Authorized Drivers — every screen, every button, the colours and labels, and how it all maps to the study's objectives.

Rescue Vehicle Management System — for the Bureau of Fire Protection (BFP), Philippine National Police (PNP), City Disaster Risk Reduction and Management Office (CDRRMO), and City Health Office (CHO), Calbayog City.

Read this before testing. It explains, in simple terms, what the driver app does and how to move through every screen, so you can try it out and give useful feedback. The app currently runs on built-in **sample data** — nothing you enter is saved yet, so explore freely.

***This is one of two guides.** A separate guide covers the Admin Website.*

1. About the driver app

The **Rescue Vehicle Management System (RVMS)** has two parts: an **Android app for drivers** (this guide) and a **web dashboard for agency administrators** (separate guide). This app lets an Authorized Driver see their assigned vehicle, submit daily safety inspections and damage reports from the field, and receive notifications.

The problem it solves

Today, drivers report vehicle problems through paper forms, phone calls and group chats, so information gets scattered and delayed. This app turns daily inspections and damage reports into quick, consistent digital records that the agency administrator can act on right away.

Who uses it

- **Authorized Drivers** — the only users of this app. Each driver signs in to their own agency and sees only their assigned vehicle and records.

How it maps to the study objectives

Objective	In the driver app
1. Input vehicle & driver information	Vehicle Information and Profile screens show the assigned vehicle, driver details and licence.
2. Track vehicle maintenance	Daily BLOWBAGETS inspections and damage reports capture vehicle condition from the field.
3. Dispatch & vehicle management	The live vehicle status and the Alerts (notifications) keep the driver in sync with the admin.
4. Generate relevant reports	Done on the Admin Website, not the app — the app supplies the inspection and damage data that those reports use.

2. How the app looks & what the colours mean

The design is called “**Structured Authority**”: clean white screens framed by a bold navy structure (the splash, headers, primary buttons and the assigned-vehicle card). It looks official and stays easy to read, with big touch targets for use in the field. The same colours mean the same things here as on the Admin Website.

Brand colours

Colour	Name	Hex	Where it is used
	Navy Blue (primary)	#1B2F72	Splash, screen headers, primary buttons, the assigned-vehicle card.
	Gold (accent)	#D4A017	Identity only: the logo, vehicle plate numbers, and the agency badge.

Vehicle status colours (same on the website)

Operational	Available and ready to deploy.
Dispatched	Currently out on a mission.
Under Preventive Maintenance	Undergoing scheduled maintenance.
Not Operational	Damaged or unavailable for service.

Inspection & report colours

OK	An inspection item that passed (or an “All OK” inspection).
Has Issue	An inspection item with a problem (needs remarks).
Pending	A damage report waiting for the admin to review (slate — on purpose, not a vehicle colour).
Reviewed	A damage report the admin has reviewed (navy).

Neutrals

Colour	Name	Hex	Where it is used
	Background	#F5F7FA	The screen background behind cards.
	Surface / Card	#FFFFFF	Cards and forms.
	Primary text	#0F172A	Main readable text.
	Secondary text	#64748B	Labels and hints.

3. Getting started

Install the app

- On an Android 8.0+ phone, open the latest build and download **app-debug.apk**:
github.com/tormis-neil/rvms-capstone/releases/tag/apk-latest
- Tap the file to install; allow “install unknown apps” if your phone asks.
- Developers can also run it from Android Studio (open the **mobile/** project and press Run).

Sign in (prototype demo)

On the Sign In screen, tap one of the four agency chips to choose which agency’s sample driver to explore, type any email and password, and tap **Sign In**. Each agency shows a different vehicle and status, so you can see every colour and state:

Agency	Driver	Vehicle	Plate	Status shown
BFP	Juan Dela Cruz	Fire Truck	ABC-1234	Operational
PNP	Mark Santos	Patrol Vehicle	XYZ-9876	Dispatched
CDRRMO	Pedro Penduko	Rescue Truck	LMN-4567	Under Preventive Maintenance
CHO	Jose Rizal	Ambulance	DEF-5678	Not Operational

Tip: choose **CDRRMO** to see the long “Under Preventive Maintenance” status, or **BFP** to see the two extra fire-truck inspection items.

Home	Inspect	Damage	Alerts •2	Profile
------	---------	--------	-----------	---------

Sketch: the bottom navigation — five tabs, with Home selected (gold marker) and a red count on Alerts.

4. Screen-by-screen walkthrough

Each screen below lists its purpose, what you'll see, and what every button does. The five main areas are reached from the bottom tabs — **Home**, **Inspect**, **Damage**, **Alerts**, **Profile**.

4.1 Splash

Purpose: A short branded loading screen.

What you'll see

- The RVMS logo and “Rescue Vehicle Management System” on a navy background.

Buttons & actions

- None — it moves to the Sign In screen automatically after about 2 seconds.

4.2 Sign In

Purpose: Lets a driver enter the app.

What you'll see

- The system name, an **Email** and **Password** field, and a “Sign in as” row of four agency chips (BFP, PNP, CDRRMO, CHO — BFP is selected by default).
- A red message appears if a field is empty or the email looks invalid.

Buttons & actions

- **Agency chips** — pick which agency account to view (prototype demo).
- **Sign In** (navy) — opens the Home screen for that agency.
- **Request one** (in “Need an account? Request one”) — opens the account-request screen.

Supports: Objectives 1 & 3 (each driver is scoped to one agency).

4.3 Request an Account

Purpose: Lets a new driver ask their agency admin for an account.

What you'll see

- A short note: “Accounts are created by the administrator — this form only sends a request.”
- Three fields only: **Full Name**, **Email**, and **Agency** (a dropdown). There is no password here.

Buttons & actions

- **Submit Request** — shows a “Request Submitted” pop-up explaining the admin will create the account; tap **Back to Sign In** to return. It does not sign you in.
- **Sign In** — returns to the Sign In screen.

Supports: The two-role design: drivers are onboarded by their admin (who sets the password).

4.4 Home

Purpose: The driver's starting point and readiness summary.

Sketch: the Home “Assigned Vehicle” card — navy panel, gold plate, status badge top-right.

What you'll see

- A greeting (“Good day, ...”) with the agency name and logo.

- An **Assigned Vehicle** card (navy) showing the type, plate (gold), make/model/mileage chips, and the current status badge top-right.
- A **License Status** card (“Valid”, or “Expiring Soon” with a renewal note).
- **Quick Actions**: Daily Inspection, Report Damage, Vehicle Info.
- A **Recent Activity** list of your latest inspections, reports and status updates.

Buttons & actions

- **Assigned Vehicle card / Vehicle Info** — open Vehicle Information.
- **Daily Inspection** — open the inspection checklist.
- **Report Damage** — open the damage form.
- **Pull down** to refresh.

Supports: Objectives 1 & 3 (see your vehicle and its live status).

4.5 Vehicle Information

Purpose: Shows the full details of the assigned vehicle.

Rescue Truck
LMN-4567

**Under Preventive
Maintenance**

Sketch: the Vehicle Information banner — type and plate on the left, status badge on the right (a long label like “Under Preventive Maintenance” wraps neatly).

What you'll see

- A navy banner with the vehicle type and plate on the **left** and the status badge on the **right**.
- A **Vehicle Details** card: Vehicle Type, Plate Number, Make, Model, Engine No., Chassis No., Current Mileage.
- An **Assignment** card: Assigned Driver and Agency.

Buttons & actions

- **Back** arrow (top-left) — returns to the previous screen.

Supports: Objective 1 (vehicle & driver information).

4.6 BLOWBAGETS Inspection (Inspect tab)

Purpose: Start a daily safety inspection or review past ones.

What you'll see

- The title “BLOWBAGETS Inspection” and “Daily vehicle inspection checklist”.
- If none was done today: a **Start New Inspection** button.
- If one was done today: a green “Inspection submitted today” banner with the time, item count and result.
- An **Inspection History** list — each entry shows the date, item count, and an “All OK” (green) or “N Issues” (red) badge, plus any flagged items.

Buttons & actions

- **Start New Inspection** — opens the checklist.
- **View Today's Inspection** — opens today's result.
- **Submit Another Inspection** — asks you to confirm before adding a second one for today.
- **Tap a history entry** — opens its full details.

Supports: Objective 2 (track maintenance through daily checks).

4.7 New Inspection

Purpose: The daily BLOWBAGETS safety checklist.

The screenshot shows a mobile app interface for an inspection item. At the top, there's a blue header with a white circle containing the letter 'B' followed by the text 'Brakes'. To the right of this header are two buttons: a light green button labeled 'OK' and a red button labeled 'Has Issue'. Below the header is a light blue box containing the text 'Remarks (required): Unusual noise when braking'.

*Sketch: one inspection item — tap **OK** (turns green) or **Has Issue** (turns red); a red item opens a required Remarks box.*

What you'll see

- A small card naming your assigned vehicle.
- **12 standard items:** Battery, Lights, Oil, Water, Brakes, Air, Gas, Engine, Tires, Power Steering, Horn/Siren, Directional Signals.
- **2 extra items for BFP only:** Hydraulic System and Fire Pump (so BFP fire trucks have 14 items).
- A progress line at the bottom: "Marked N of X items" with a progress bar.
- Helpful red messages if something is missing.

Buttons & actions

- **OK** (green) / **Has Issue** (red) — tap one for every item; choosing "Has Issue" opens a **required Remarks** box.
- **Submit Inspection** — only works once every item is marked and all flagged items have remarks; then shows a confirmation.
- **Back** — leaves without saving.

Supports: Objective 2 (digital BLOWBAGETS inspection).

4.8 Inspection Detail

Purpose: A read-only view of one completed inspection.

What you'll see

- A summary (date, time, item count, overall result, vehicle and driver).
- "Checklist Results" — every item marked OK (green) or Has Issue (red), with the remarks shown for flagged items.

Buttons & actions

- **Back** arrow — returns to the inspection list.

Supports: Objective 2.

4.9 Damage Report (Damage tab)

Purpose: Submit a new damage report or review past ones.

What you'll see

- The title "Damage Report" and "Submit and track vehicle damage reports".
- A **Submit New Report** button.
- A **Damage Reports History** list — each entry shows the date, a status badge (**Pending** slate / **Reviewed** navy), the nature of damage and suspected parts.

Buttons & actions

- **Submit New Report** — opens the damage form.
- **Tap an entry** — shows the report summary.

Supports: Objective 2 (damage & defect reporting).

4.10 New Damage Report

Purpose: Report damage with details and an optional photo.

What you'll see

- A read-only **Vehicle Information** card filled in for you: Vehicle Type, Plate No., Make/Model, Engine No., Chassis No., Assigned Driver, and today's **Date Reported**.
- **Nature of Damage** (required) and **Suspected Defective Parts** (optional).
- An optional **photo** box ("Tap to attach photo").

Buttons & actions

- **Tap to attach photo** — adds/removes a photo (optional).
- **Submit Report** — needs the Nature of Damage; saves the report as **Pending** and notifies the admin, then shows a confirmation.
- **Back** — leaves without saving.

Supports: Objective 2.

4.11 Alerts (Notifications tab)

Purpose: Keeps the driver informed without phone calls or group chats.

What you'll see

- The title “Notifications”, with items grouped by **Today / Yesterday / Earlier**.
- Two kinds: **Preventive Maintenance reminders** (orange) and **Vehicle Status updates** (the icon colour matches the new status).
- Unread items are highlighted; the Alerts tab shows a small red count.

Buttons & actions

- **Pull down** to refresh. (Items are informational in the prototype.)

Supports: Objective 3 (notifications keep everyone coordinated).

4.12 Profile

Purpose: The driver's account information and sign-out.

What you'll see

- Your initials, name, the “Authorized Driver” label, and the agency badge (gold).
- A **Driver Information** card: Full Name, Email, Agency, License No., License Expiry.

Buttons & actions

- **View Assigned Vehicle** — opens Vehicle Information.
- **Sign Out** (red) — returns to the Sign In screen.

Supports: Objective 1.

5. Scope & limitations (please keep these in mind)

What the app does

- Shows the driver's assigned vehicle, its live status, and licence details.
- Lets drivers submit daily BLOWBAGETS inspections (12 items; 14 for BFP) with required remarks for any problem.
- Lets drivers file damage reports with an optional photo.
- Delivers maintenance reminders and vehicle-status notifications.

What it does not do (on purpose)

- Two roles only — this app is for **Authorized Drivers**; admins use the website.
- **Android phones only**, and an internet connection is needed (no offline mode).
- No GPS, live tracking, maps, or automatic vehicle diagnostics.
- Drivers cannot self-register — the agency admin creates the account.
- One primary driver per vehicle; report generation is on the website, not the app.

***Prototype note:** the app uses built-in sample data to show every screen and flow. There is no live database yet (that backend comes in the development phase), so nothing you type is permanently saved.*

6. How to test & give feedback

Try these

- Sign in as different agencies and notice how the vehicle and status colour change.
- Start a **New Inspection**, mark one item **Has Issue**, and see the required remarks and the progress bar.
- Sign in as **BFP** and confirm the two extra items (Hydraulic System, Fire Pump).
- File a **Damage Report** and watch it appear as **Pending**.
- Open **Vehicle Information** and the **Alerts** tab.
- Check that a status word and its colour match what you would expect on the website.

Tell us

- Was anything confusing, mislabeled, or hard to find?
- Did a button do something unexpected?
- Were the buttons and text comfortably large and readable in the field?
- Are the words and colours clear and consistent?
- Is anything missing that a driver needs for daily work?

Thank you for helping test the RVMS driver app. The Admin Website guide is provided separately.
