

RESCUE VEHICLE MANAGEMENT SYSTEM

Product Walkthrough & Testing Guide

A plain-language tour of the driver mobile app and the admin website — what each screen does, every button, the design and colours, and how it all maps to the study's objectives.

Prepared for the project team and participating agencies: Bureau of Fire Protection (BFP), Philippine National Police (PNP), City Disaster Risk Reduction and Management Office (CDRRMO), and City Health Office (CHO), Calbayog City.

How to use this guide. Read it before testing the prototype. It explains, in simple terms, what the product is, how to move through each screen, and what to look for so you can give useful feedback. The prototype currently runs on built-in sample data — no real records are stored yet.

1. What the system is, and the problem it solves

The **Rescue Vehicle Management System (RVMS)** is a two-part digital tool that helps Calbayog City's rescue agencies keep their vehicles ready for emergencies. It has an **Android app for Authorized Drivers** and a **web dashboard for Agency Administrators**.

The problem today

Each agency (BFP, PNP, CDRRMO, CHO) tracks vehicles, drivers, inspections, repairs and dispatches using paper forms, logbooks, text messages and group chats. Because the information is scattered, it is hard to tell at a glance which vehicles are ready, which are under repair, or which licenses are about to expire. Damage reports are sometimes incomplete, and records are easy to lose.

The purpose

RVMS replaces those scattered, paper-based methods with one shared system. Drivers submit daily inspections and damage reports from their phones; administrators manage vehicles, drivers, maintenance, dispatch and reports from the web. Each agency only sees its own records.

2. The four objectives, and how the product meets them

Objective	Where you see it in the product
1. Input vehicle & driver information	Admin: Vehicle Management, Driver Management, License monitoring. Driver: Vehicle Information screen.
2. Track vehicle maintenance	Digital BLOWBAGETS inspections, Damage reporting & review, Repair Logs, Preventive Maintenance scheduling, and Frequently Reported Issues.
3. Admin module for dispatch & vehicle management	Dashboard summary, Dispatch Logging & monitoring, one shared vehicle status, agency-scoped access, and notifications.
4. Generate relevant reports	A Reports page that produces printable records for inspections, damage, repairs, PM, dispatch and vehicle status.

3. Design philosophy & how it looks

The look is called “**Structured Authority**”: clean white work areas framed by a bold navy structure (sidebars, top bars, primary buttons). The professionalism comes from the structure, not from painting everything dark — so data and status colours stay easy to read. The guiding ideas:

- **Simplicity** — common tasks take as few steps as possible.
- **Operational visibility** — vehicle readiness, due maintenance and alerts are front-and-centre.
- **Consistency** — the phone app and the website use the same colours, words and status meanings.
- **Mobile-first capture** — big touch targets and simple forms for drivers working in the field.
- **Role-based** — drivers see only their tasks; admins see management tools.
- **Readable** — high contrast and clear labels for use during or after operations.

Brand colours

Colour	Name	Hex	Where it is used
	Navy Blue (primary)	#1B2F72	Sidebars, top bars, primary buttons, headings — the system's backbone.
	Dark Navy	#0E1C4A	Deeper navy for button hovers and accents.
	Gold (accent)	#D4A017	Identity only: the logo mark, the active-menu marker, and the agency badge.

Gold is a prestige accent, kept off ordinary buttons and links so it stays special — the same way each agency logo uses it.

Vehicle status colours (identical on phone and web)

Operational	Vehicle is available and ready to deploy.
Dispatched	Vehicle is currently out on a mission.
Under Preventive Maintenance	Vehicle is undergoing scheduled maintenance.
Not Operational	Vehicle is damaged or unavailable for service.

Other status labels

Pending	A report/inspection waiting for admin review (slate — deliberately not a vehicle colour).
Reviewed	The admin has reviewed it (navy).
Due Soon	Maintenance is approaching its threshold.
Due	Maintenance has reached/passed its threshold.
Upcoming	Maintenance is scheduled but not yet near due.

Neutrals

Colour	Name	Hex	Where it is used
	Background	#F5F7FA	Page background behind cards.
	Surface / Card	#FFFFFF	Cards, tables and forms (with a thin border).
	Border	#E2E8F0	Lines and dividers.

	Primary text	#0F172A	Main readable text.
	Secondary text	#64748B	Labels and helper text.

PART A — Driver Mobile App (Android)

Who uses it: **Authorized Drivers**. They sign in, see their assigned vehicle, submit daily inspections and damage reports, and receive notifications. A bottom bar with five tabs — **Home, Inspect, Damage, Alerts, Profile** — is always available.

A1 Splash

Purpose: A short branded loading screen.

What you'll see

- The RVMS logo and system name on a navy background.

Buttons & actions

- None — it moves to the Sign In screen automatically after about 2 seconds.

A2 Sign In

Purpose: Lets a driver enter the app.

What you'll see

- Email and Password fields.
- Four demo chips (BFP, PNP, CDRRMO, CHO) used only in this prototype to pick which agency account to view.
- A red message appears if details are missing or the email looks invalid.

Buttons & actions

- **Sign In** — checks the details and opens the Home screen for the chosen agency.
- **Request one** — opens the account-request screen.
- **Demo chips** — tap to choose the agency account to sign in as.

Supports: *Objective 1 (role-based access by agency).*

A3 Request an Account

Purpose: Lets a new driver ask the agency admin for an account.

What you'll see

- Three fields only: Full Name, Email, and Agency.
- A short note explaining this only sends a request — it does not create an account or sign you in.

Buttons & actions

- **Submit Request** — shows a “Request Submitted” confirmation; the agency admin creates the account (and sets the password) after approval.
- **Sign In** — returns to the Sign In screen.

Supports: *Reflects the limitation that only two roles exist and drivers are onboarded by their admin.*

A4 Home

Purpose: The driver's starting point and readiness summary.

Sketch: the driver Home “Assigned Vehicle” card — navy panel, gold plate, status badge top-right.

What you'll see

- A greeting with the agency name and logo.
- An **Assigned Vehicle** card (navy) showing type, plate (gold), make/model/mileage, and the current status badge.
- A **License Status** card (Valid, or Expiring Soon with a renewal note).
- **Quick Actions**: Daily Inspection, Report Damage, Vehicle Info.
- A **Recent Activity** list of the latest inspections, reports and status updates.

Buttons & actions

- **Assigned Vehicle card** — opens Vehicle Information.
- **Daily Inspection** — opens the inspection checklist.
- **Report Damage** — opens the damage report form.
- **Vehicle Info** — opens Vehicle Information.
- **Pull down** to refresh.

Supports: Objectives 1 & 3 (see your vehicle and its live status).

A5 Vehicle Information

Purpose: Shows the full details of the assigned vehicle.

What you'll see

- A navy banner with vehicle type and plate on the left and the status badge on the right.
- A **Vehicle Details** card: Type, Plate, Make, Model, Engine No., Chassis No., Current Mileage.
- An **Assignment** card: Assigned Driver and Agency.

Buttons & actions

- **Back** arrow — returns to the previous screen.

Supports: Objective 1 (vehicle & driver information).

A6 Daily Inspection (list)

Purpose: Where drivers start or review BLOWBAGETS inspections.

What you'll see

- A button to start a new inspection (or, if one was done today, a green “submitted today” banner).
- An **Inspection History** list, each entry marked “All OK” (green) or with an issue count (red).

Buttons & actions

- **Start New Inspection** — opens the checklist form.
- **View Today's Inspection** — opens today's result.
- **Submit Another Inspection** — asks to confirm before adding a second one for today.
- A **history entry** — opens its detailed results.

Supports: Objective 2 (track maintenance through daily checks).

A7 New Inspection (BLOWBAGETS checklist)

Purpose: The daily safety checklist for the vehicle.

What you'll see

- A small card naming the assigned vehicle.
- **12 standard items**: Battery, Lights, Oil, Water, Brakes, Air, Gas, Engine, Tires, Power Steering, Horn/Siren, Directional Signals.
- **2 extra items for BFP only**: Hydraulic System and Fire Pump.
- Each item has an **OK** (green) and a **Has Issue** (red) button; choosing “Has Issue” reveals a required Remarks box.
- A progress bar at the bottom shows how many items are marked.

Buttons & actions

- **OK / Has Issue** — mark each item; remarks are required for any “Has Issue”.
- **Submit Inspection** — allowed only when every item is marked and all flagged items have remarks; then shows a confirmation.
- **Back** — leaves without saving.

Supports: Objective 2 (digital BLOWBAGETS inspection).

A8 Inspection Detail

Purpose: Shows the results of one completed inspection.

What you'll see

- A summary (date, time, item count, overall result, vehicle and driver).
- Every checklist item marked OK (green) or Has Issue (red), with the remarks shown for flagged items.

Buttons & actions

- **Back** arrow — returns to the inspection list.

Supports: Objective 2.

A9 Damage Report (list)

Purpose: Where drivers start or review damage reports.

What you'll see

- A button to submit a new report.
- A history list showing each report's nature, suspected parts, and status (Pending or Reviewed).

Buttons & actions

- **Submit New Report** — opens the damage form.
- **A history entry** — shows the report summary.

Supports: Objective 2 (damage & defect reporting).

A10 New Damage Report

Purpose: Lets a driver report damage with details and an optional photo.

What you'll see

- The vehicle's details are filled in automatically (read-only), including the date.
- **Nature of Damage** (required) and **Suspected Defective Parts** (optional).
- An optional **Photo** attachment (represented in the prototype).

Buttons & actions

- **Submit Report** — requires the Nature of Damage; the report is saved as “Pending” and the admin is notified.
- **Back** — leaves without saving.

Supports: Objective 2.

A11 Alerts (Notifications)

Purpose: Keeps drivers informed without phone calls or group chats.

What you'll see

- Notifications grouped by Today / Yesterday / Earlier.
- Two kinds: **Preventive Maintenance reminders** and **Vehicle Status updates** (the icon colour matches the status).
- Unread items are highlighted; the Alerts tab shows a red count.

Buttons & actions

- **Pull down** to refresh.
- Items are informational in the prototype.

Supports: Objective 3 (notifications keep everyone coordinated).

A12 Profile

Purpose: The driver's account information.

What you'll see

- Name, "Authorized Driver" label, and the agency badge.
- A **Driver Information** card: Full Name, Email, Agency, License No., License Expiry.

Buttons & actions

- **View Assigned Vehicle** — opens Vehicle Information.
- **Sign Out** — returns to the Sign In screen.

PART B — Admin Website

Who uses it: **Agency Administrators**. Every page shares the same frame: a **navy sidebar** on the left (grouped menus — Overview, Maintenance, Operations, Fleets, Settings; the active page has a gold marker) and a **top bar** with the agency badge, a notification bell, and the admin menu. Each admin only sees their own agency's data (the prototype switches agencies from the login page).

Sketch: the admin website — navy sidebar (gold marks the active page) and the 8 dashboard summary cards.

B1 Loading & Sign In

Purpose: Entry to the admin website.

What you'll see

- A short loading screen, then a Sign In page with Email and Password.
- Demo chips (BFP, PNP, CDRMO, CHO) to open a specific agency's dashboard in this prototype.

Buttons & actions

- **Sign In** — opens the dashboard.
- **Sign Up** — opens the Create Account page.
- **Agency chips** — jump straight into that agency's dashboard.

Supports: *Objective 3 (agency-scoped admin access).*

B2 Create Account

Purpose: Lets an agency administrator register their own account (no approval needed).

What you'll see

- Fields: Full Name, Email, Agency, Password and Confirm Password.
- A note that the account only accesses the chosen agency's records.

Buttons & actions

- **Create Account** — after the passwords match, opens that agency's dashboard.
- **Sign In** — returns to the login page.

Supports: *Reflects the two-role design: admins self-register; drivers are added by an admin.*

B3 Dashboard

Purpose: A one-look summary of fleet readiness.

What you'll see

- **Eight summary cards:** Total Vehicles, Operational, Dispatched, Under Preventive Maintenance, Not Operational, Total Drivers, Expiring Licenses, Pending Damage Reports.
- **Quick Actions** shortcuts to the main pages.
- **Action Required** panels: pending inspections/damage, and expiring or expired licenses.

Buttons & actions

- **Each summary / quick-action card** — opens the related page.
- **Action Required items** — jump to the inspection/damage or driver record that needs attention.

Supports: Objective 3 (admin overview & fleet availability).

B4 Vehicles

Purpose: Manage the agency's vehicles and their status.

What you'll see

- A search/filter bar and a table: Plate, Vehicle Details, Assigned Driver, Mileage, Status, Actions.
- The Status pill shows the full label, e.g. "Under Preventive Maintenance".

Buttons & actions

- **Add Vehicle** — register a vehicle (type, plate, make, model, engine/chassis no., mileage, driver).
- **View** (eye) — see full details.
- **Edit** (pencil) — change details.
- **Update Status** (refresh) — set Operational / Not Operational / Under Preventive Maintenance (Dispatched is set automatically by the Dispatch page).

Supports: Objectives 1 & 3.

B5 Drivers

Purpose: Manage drivers and watch licence expiry.

What you'll see

- Three summary cards (Valid / Expiring Soon / Expired) and a table: Driver, License No., Expiry, Status, Assigned Vehicle, Actions.

Buttons & actions

- **Add Driver** — register a driver (name, email, sign-in password, license no. & expiry, vehicle).
- **View / Edit** — see or change details.
- **Update License** — set a new expiry, with handy "+5 years" / "+10 years" buttons and a live Valid/Expiring/Expired preview.

Supports: Objective 1 (driver records & licence monitoring).

B6 Inspections & Damage

Purpose: Review what drivers submit and spot recurring problems.

What you'll see

- A **BLOWBAGETS inspections** table (date, vehicle/driver, result, remarks, review status).
- A **Frequently Reported Issues** card ranking the most common problems for the agency.
- A **Damage Reports** table (date, vehicle/driver, nature, suspected parts, attachment, review status).

Buttons & actions

- **View Checklist** — see all 12 (or 14 for BFP) inspection items.
- **Review & Assess** — review an inspection or damage report (marks it Reviewed).
- Review status uses slate "Pending" and navy "Reviewed" (matching the phone app).

Supports: Objective 2 (inspection monitoring & damage review).

B7 PM Schedules (Preventive Maintenance)

Purpose: Plan and record maintenance per vehicle.

What you'll see

- Two tabs: **Active Schedules** and **Completed Records**.

- Active rows show the target, schedule type (mileage- or time-based), when it is due, and a status: **Upcoming**, **Due Soon**, or **Due**.

Buttons & actions

- **Create PM Schedule** — set the part, type, interval, last-PM mileage and “due soon” threshold.
- **Mark Completed** — record date serviced, repair source, parts and remarks.
- **Edit** (pencil) — adjust an upcoming schedule.

Supports: Objective 2 (preventive maintenance scheduling).

B8 Repair Logs

Purpose: Keep a permanent history of repairs.

What you'll see

- A table: Date, Vehicle/Driver, Scope of Work, Parts, Cost, Repair Source, Remarks, Vehicle Status, Actions.
- Repair source can be Internal Office, GSO Motorpool, or External Repair Shop.

Buttons & actions

- **Log Repair** — record a repair; choosing **External Repair Shop** reveals a box to name the shop.
- **Edit** (pencil) — change a log.
- **Update Status** (refresh) — set the vehicle's status separately after the repair.

Supports: Objective 2 (repair logging).

B9 Dispatch Logs

Purpose: Record deployments and monitor which vehicles are out.

What you'll see

- A banner showing how many vehicles are currently deployed, and a table of dispatches (mission & location, vehicle/driver, time out, time in, status).
- Mission types include Fire/Medical Response, Rescue Operation, Patrol, Administrative Travel, and Others.

Buttons & actions

- **New Dispatch** — log a deployment; choosing **Others** reveals a box to specify the mission; opening a dispatch sets the vehicle to Dispatched.
- **Close Dispatch** — record time-in and choose the return status (Operational / Not Operational / Under Preventive Maintenance).
- **Edit / View** — adjust or review a dispatch.

Supports: Objective 3 (dispatch logging & fleet availability).

B10 Reports

Purpose: Produce clean, printable records.

What you'll see

- Six report types: Inspection Records, Damage & Defects, Repair & Maintenance History, Preventive Maintenance Records, Dispatch Logs, and Vehicle Status Summary.
- Each report opens with the agency name, the filters used, and a neat table.

Buttons & actions

- **Configure Report** — pick filters (date range, vehicle, driver) and generate the report below.
- **Print / Save as PDF** — prints just the report (sidebar and buttons are hidden).
- **Clear** — removes the generated report.

Supports: Objective 4 (report generation).

B11 Notifications

Purpose: The full alert history for the agency.

What you'll see

- Alerts grouped by Today / Yesterday / Earlier: new damage reports, licence alerts, and PM due alerts.

Buttons & actions

- **Mark All as Read** — clears the unread state.
- **An alert** — jumps to the related page.

Supports: Objective 3.

B12 Agency Profile

Purpose: Agency details and the admin's own account settings.

What you'll see

- Agency name, location and contact; the agency logo; and the admin account fields.
- An area to change the password (leave blank to keep the current one).

Buttons & actions

- **Change Agency Logo** — update the displayed logo.
- **Save Changes** — save the agency and account details.

4. Scope & limitations (please keep these in mind while testing)

What the system DOES

- Manages vehicle & driver records, with licence-expiry alerts.
- Digital BLOWBAGETS inspections (12 items; 14 for BFP).
- Damage reports with review and status updates.
- Repair logging and preventive-maintenance scheduling.
- Dispatch logging with automatic “Dispatched” status and a return status on close.
- A dashboard summary and printable reports.
- Separate data per agency; in-app notifications.

What it intentionally does NOT do

- Only two roles: Agency Administrator and Authorized Driver (no GSO or outside mechanics log in).
- Android phones only — no iPhone or desktop app.
- Needs an internet connection (no offline mode).
- No GPS, live tracking, maps, or IoT/telematics diagnostics.
- Dispatch is logging only — no automatic assignment or radio.
- Records rely on people entering data; mileage is updated by the admin.
- Reports are not official COA/government forms.
- One main driver per vehicle (CHO’s rotating shifts are handled via the dispatch record).

About this prototype: the phone app and website currently use built-in sample data to demonstrate every screen and flow. There is no live database yet — that backend (Laravel, MySQL, and push notifications) comes in the development phase. Nothing you type is saved permanently, so feel free to explore freely.

5. Tools used (prototype)

- **Driver app:** Kotlin with Jetpack Compose (Android 8.0+), built as a shareable APK.
- **Admin website:** HTML, CSS and Bootstrap with JavaScript, running on sample data; opens in any modern browser.
- **Planned backend (next phase):** Laravel + MySQL for data, and Firebase Cloud Messaging for push notifications.

6. How to test & give feedback

Getting in

- **Admin website:** open the deployed link in a browser, then pick an agency (BFP, PNP, CDRRMO or CHO) on the login page to explore that agency's data.
- **Driver app:** install the APK from the project's "apk-latest" release link, open it, and choose an agency on the Sign In screen. (Allow "install unknown apps" if your phone asks.)

Suggested things to try

- Driver: submit a BLOWBAGETS inspection — mark an item "Has Issue" and notice the required remarks.
- Driver: file a damage report and watch it appear as "Pending".
- Driver: open Vehicle Information and the Alerts tab.
- Admin: review a pending inspection/damage report and update a vehicle's status.
- Admin: open a dispatch (try the "Others" mission), then close it with a return status.
- Admin: log a repair from an "External Repair Shop" and name the shop.
- Admin: generate a couple of reports and use Print / Save as PDF.
- Both: check that the same status word and colour mean the same thing on the phone and the website.

What to tell us

- Was anything confusing, mislabeled, or in the wrong place?
- Did any button not do what you expected?
- Are the words and colours clear and consistent?
- Is anything missing that your agency needs for daily work?
- On the phone: were the buttons and text comfortably large and readable?

Thank you for helping us test the Rescue Vehicle Management System. Your feedback shapes the next version.
