

RVMS ADMIN WEBSITE

User Guide & Walkthrough

A plain-language tour of the web dashboard for Agency Administrators — every page, every button and pop-up form, the colours and labels, and how it all maps to the study's objectives.

Rescue Vehicle Management System — for the Bureau of Fire Protection (BFP), Philippine National Police (PNP), City Disaster Risk Reduction and Management Office (CDRRMO), and City Health Office (CHO), Calbayog City.

Read this before testing. It explains, in simple terms, what the admin website does and how to use every page, so you can try it out and give useful feedback. The site currently runs on built-in **sample data**, separated per agency — nothing you enter is saved yet, so explore freely.

***This is one of two guides.** A separate guide covers the Driver Mobile App.*

1. About the admin website

The **Rescue Vehicle Management System (RVMS)** has two parts: a **web dashboard for agency administrators** (this guide) and an **Android app for drivers** (separate guide). From the website, an administrator manages vehicles and drivers, reviews what drivers submit, schedules maintenance, logs repairs and dispatches, and generates printable reports — all for their own agency.

The problem it solves

Today, agencies keep vehicle, driver, maintenance and dispatch information across paper forms, logbooks and group chats, so it is hard to see fleet readiness at a glance. This website brings it all into one place, with a dashboard, searchable records, and reports.

Who uses it

- **Agency Administrators** — the only users of the website. Each admin signs in to one agency and sees and manages only that agency’s records.

How it maps to the study objectives

Objective	On the website
1. Input vehicle & driver information	Vehicles, Drivers, and licence-expiry monitoring.
2. Track vehicle maintenance	Inspections & Damage review, PM Schedules, Repair Logs, and Frequently Reported Issues.
3. Dispatch & vehicle management	Dashboard summary, Dispatch Logs, one shared vehicle status, agency-scoped access, and notifications.
4. Generate relevant reports	The Reports page produces printable records for every activity.

2. How the website looks & what the colours mean

The design is called “**Structured Authority**”: clean white pages framed by a bold navy structure (the sidebar, the top bar, and primary buttons). It reads as professional and official, and keeps data and status colours easy to see. The same colours mean the same things here as in the driver app.

Brand colours

Colour	Name	Hex	Where it is used
	Navy Blue (primary)	#1B2F72	Sidebar, top bar, primary buttons, page headings.
	Gold (accent)	#D4A017	Identity only: the logo mark, the active-menu marker (left edge), and the agency badge — never on ordinary buttons.

Vehicle status colours (same in the app)

Operational	Available and ready to deploy.
Dispatched	Currently out on a mission (set automatically when a dispatch opens).
Under Preventive Maintenance	Undergoing scheduled maintenance.
Not Operational	Damaged or unavailable for service.

Review & maintenance status colours

Pending	An inspection/damage report waiting for review (slate — on purpose, not a vehicle colour).
Reviewed	The admin has reviewed it (navy).
Upcoming	A maintenance schedule that is set but not yet near due.
Due Soon	Maintenance is approaching its threshold.
Due	Maintenance has reached or passed its threshold.

Neutrals

Colour	Name	Hex	Where it is used
	Background	#F5F7FA	The page background behind cards.
	Surface / Card	#FFFFFF	Cards, tables and pop-up forms.
	Primary text	#0F172A	Main readable text.
	Secondary text	#64748B	Labels and hints.

3. Getting started

Open the website

- Open the deployed link in any modern browser (Chrome, Edge or Firefox).
- To run it locally, serve the **web/** folder (for example `python3 -m http.server 8080`) and open `http://localhost:8080`.
- For the prototype demo, the login page has four agency chips (BFP, PNP, CDRRMO, CHO) — tap one to open that agency's dashboard. In the real system, your agency is identified automatically from your account.

The shared layout

Every page after login uses the same frame: a **navy sidebar** on the left with grouped menus (**Overview**, **Maintenance**, **Operations**, **Fleets**, **Settings**; the active page is marked with a gold edge), and a **top bar** with the agency badge, a notification bell (with an unread count), and the admin menu (Profile, Sign Out). Each administrator only sees their own agency's data.

Sketch: every page shares this frame — a navy sidebar (gold marks the active page) and, on the Dashboard, the 8 summary cards with status-coloured edges.

4. Page-by-page walkthrough

Each page below lists its purpose, what you'll see, and what every button and pop-up form does.

4.1 Loading & Sign In

Purpose: Entry to the admin website.

What you'll see

- A short loading screen, then a Sign In page with **Email** and **Password**.
- Four agency chips (BFP, PNP, CDRMO, CHO) to open a specific agency's dashboard in this prototype.

Buttons & actions

- **Sign In** — opens the dashboard.
- **Sign Up** — opens the Create Account page.
- **Agency chips** — jump straight into that agency's dashboard.

***Supports:** Objective 3 (agency-scoped admin access).*

4.2 Create Account

Purpose: Lets an agency administrator register their own account (no approval needed).

What you'll see

- Fields: Full Name, Email, Agency, Password and Confirm Password, with a note that the account only accesses the chosen agency's records.

Buttons & actions

- **Create Account** — once the passwords match, opens that agency's dashboard.
- **Sign In** — returns to the login page.

***Supports:** The two-role design: admins self-register; drivers are added by an admin.*

4.3 Dashboard

Purpose: A one-look summary of fleet readiness.

What you'll see

- **Eight summary cards:** Total Vehicles, Operational, Dispatched, Under Preventive Maintenance, Not Operational, Total Drivers, Expiring Licenses, Pending Damage Reports.
- **Quick Actions** shortcuts, and **Action Required** panels for pending inspections/damage and expiring or expired licences.

Buttons & actions

- **Each summary or quick-action card** — opens the related page.
- **Action Required items** — jump to the record that needs attention.

***Supports:** Objective 3 (admin overview & fleet availability).*

4.4 Vehicles

Purpose: Manage the agency's vehicles and their status.

What you'll see

- A search/filter bar and a table: Plate, Vehicle Details, Assigned Driver, Mileage, Status, Actions. The Status pill shows the full label (e.g. "Under Preventive Maintenance").

Buttons & actions

- **Add Vehicle** — a form for type, plate, make, model, engine/chassis no., mileage and assigned driver.
- **View** (eye) — see full details.
- **Edit** (pencil) — change details.

- **Update Status** (refresh) — set Operational / Not Operational / Under Preventive Maintenance (Dispatched is set automatically by the Dispatch page).

Supports: Objectives 1 & 3.

4.5 Drivers

Purpose: Manage drivers and watch licence expiry.

What you'll see

- Three summary cards (Valid / Expiring Soon / Expired) and a table: Driver, License No., Expiry, Status, Assigned Vehicle, Actions. Expiring/expired dates are shown in red.

Buttons & actions

- **Add Driver** — a form for name, email (the driver's app sign-in), a password, license no. & expiry, and assigned vehicle.
- **View / Edit** — see or change details.
- **Update License** — set a new expiry, with handy “+5 years” / “+10 years” buttons and a live Valid / Expiring Soon / Expired preview.

Supports: Objective 1 (driver records & licence monitoring).

4.6 Inspections & Damage

Purpose: Review what drivers submit and spot recurring problems.

What you'll see

- A **BLOWBAGETS inspections** table (date, vehicle/driver, result, remarks, review status).
- A **Frequently Reported Issues** card that ranks the most common problems for the agency.
- A **Damage Reports** table (date, vehicle/driver, nature, suspected parts, attachment, review status).
- Review status uses slate **Pending** and navy **Reviewed** (matching the app).

Buttons & actions

- **View Checklist** — see all 12 (or 14 for BFP) inspection items.
- **Review & Assess** — review an inspection or damage report; marks it **Reviewed** (and you update the vehicle's status if needed).

Supports: Objective 2 (inspection monitoring & damage review).

4.7 PM Schedules (Preventive Maintenance)

Purpose: Plan and record maintenance per vehicle.

What you'll see

- Two tabs: **Active Schedules** and **Completed Records**.
- Active rows show the target, schedule type (mileage- or time-based), when it is due, and a status: **Upcoming**, **Due Soon**, or **Due**.

Buttons & actions

- **Create PM Schedule** — set the part, type, interval, last-PM mileage and the “due soon” threshold.
- **Mark Completed** — record date serviced, repair source, parts and remarks.
- **Edit** (pencil) — adjust an upcoming schedule.

Supports: Objective 2 (preventive maintenance scheduling).

4.8 Repair Logs

Purpose: Keep a permanent history of repairs.

Mission Type: Others (Specify) ■

Specify Mission: Community Fire Safety Parade

Sketch: choosing “Others” (or “External Repair Shop”) reveals an extra box to type the detail.

What you'll see

- A table: Date, Vehicle/Driver, Scope of Work, Parts, Cost, Repair Source, Remarks, Vehicle Status, Actions. The source can be Internal Office, GSO Motorpool, or External Repair Shop.

Buttons & actions

- **Log Repair** — record a repair; choosing **External Repair Shop** reveals a box to name the shop.
- **Edit** (pencil) — change a log.
- **Update Status** (refresh) — set the vehicle's status separately after the repair.

Supports: Objective 2 (repair logging).

4.9 Dispatch Logs

Purpose: Record deployments and monitor which vehicles are out.

What you'll see

- A banner showing how many vehicles are currently deployed, and a table of dispatches (mission & location, vehicle/driver, time out, time in, status — blue **Active** or grey **Completed**).
- Mission types: Fire/Medical Response, Rescue Operation, Patrol, Administrative Travel, and Others.

Buttons & actions

- **New Dispatch** — log a deployment; choosing **Others** reveals a box to specify the mission. Opening a dispatch sets the vehicle to **Dispatched** automatically.
- **Close Dispatch** — record the time-in and choose the return status (Operational / Not Operational / Under Preventive Maintenance).
- **Edit / View** — adjust or review a dispatch.

Supports: Objective 3 (dispatch logging & fleet availability).

4.10 Reports

Purpose: Produce clean, printable records.

Sketch: how the Reports page works.

What you'll see

- Six report types: Inspection Records, Damage & Defects, Repair & Maintenance History, Preventive Maintenance Records, Dispatch Logs, and Vehicle Status Summary.
- A generated report opens below with the agency name, the filters used, and a neat table.

Buttons & actions

- **Configure Report** — pick filters (date range, vehicle, driver) and generate the report.
- **Print / Save as PDF** — prints just the report (the sidebar and buttons are hidden).
- **Clear** — removes the generated report.

Supports: Objective 4 (report generation).

4.11 Notifications

Purpose: The full alert history for the agency.

What you'll see

- Alerts grouped by Today / Yesterday / Earlier: new damage reports, licence alerts, and PM due alerts.
- The top-bar bell shows the same alerts with an unread count.

Buttons & actions

- **Mark All as Read** — clears the unread state.
- **An alert** — jumps to the related page.

Supports: Objective 3.

4.12 Agency Profile

Purpose: Agency details and the admin's own account settings.

What you'll see

- The agency name, location and contact; the agency logo; and the admin account fields, including an area to change the password (leave blank to keep the current one).

Buttons & actions

- **Change Agency Logo** — update the displayed logo.
- **Save Changes** — save the agency and account details.

5. Scope & limitations (please keep these in mind)

What the website does

- Manages vehicle & driver records, with licence-expiry alerts.
- Reviews BLOWBAGETS inspections and damage reports, and highlights recurring issues.
- Logs repairs and schedules preventive maintenance.
- Logs dispatches (auto-setting “Dispatched”) and sets the return status on close.
- Shows a dashboard summary and generates printable reports.
- Keeps each agency’s data separate and sends in-app notifications.

What it does not do (on purpose)

- Two roles only — the website is for **Agency Administrators**; drivers use the app.
- Runs in a browser and needs an internet connection (no offline mode).
- No GPS, live tracking, maps, or automatic vehicle diagnostics.
- Dispatch is **logging and availability monitoring only** — no automatic assignment.
- Records depend on manual entry; mileage is updated by the administrator.
- Generated reports are not official COA / government forms.

Prototype note: *the website uses built-in sample data (separated per agency) to show every page and flow. There is no live database yet (that backend comes in the development phase), so nothing you type is permanently saved.*

6. How to test & give feedback

Try these

- Open different agencies from the login chips and notice the data and dashboard change.
- Review a pending inspection or damage report and update a vehicle's status.
- Open a dispatch using the **Others** mission (type a custom mission), then **Close Dispatch** with a return status.
- Log a repair from an **External Repair Shop** and name the shop.
- Create a PM schedule and mark one **Completed**.
- Generate a couple of **Reports** and use **Print / Save as PDF**.
- Check that a status word and its colour match what you see in the driver app.

Tell us

- Was anything confusing, mislabeled, or hard to find?
- Did a button or pop-up form do something unexpected?
- Are the words and colours clear and consistent with the app?
- Is anything missing that your agency needs for daily work?
- Did the printable reports look clean and complete?

Thank you for helping test the RVMS admin website. The Driver Mobile App guide is provided separately.
